

COURSE CONTENT OVERVIEW

CDM Regulations

This online CDM Regulations 2015 course has been designed to give learners an overview of the legal requirements of CDM Regulations.

The course itself is divided into three modules, an introduction and then two modules that focus on duties, planning, and preparation to help learners understand how to comply with the law. This course will be appropriate for key duty holders such as the client, the principal contractor, the principal designer, and designers and sub-contractors who all have duties under the CDM Regulations.

Module One: Introduction to CDM Regulations

The first module in this course introduces learners to the five key principles of the CDM Regulations 2015. It also provides an outline of the key duties for the client, the principal contractor, the principal designer, the designers, the contractors and the construction site workers. The topics in this module are:

- Key points
- Duty holders
- Client duties
- Designer duties
- Contractor duties

Module Two: Planning and Preparation

In this module, you'll learn how to plan and prepare the three documents that the CDM Regulations require you to create. You'll also learn how to create a client brief and how and when to notify the HSE if your project is notifiable. The topics in this module are:

- The client brief
- Project notification
- The F10 form
- Pre-construction information
- Construction phase plan
- The health and safety file

Module Three: Further Guidance

In this module, you'll discover who takes over the client duties when the project is a domestic one, how to ascertain that the people appointed to the project are suitably qualified to organise, plan and prepare it adequately. The topics in this module are:

- Domestic clients
- Pre-qualification questionnaires
- General requirements
- Requirements for designing, manufacturing, and marking work equipment and chemicals
- Welfare facilities

Aims of the training

By the end of this course, learners will be able to:

- Describe what the CDM Regulations require them to do by law.
- Understand the importance of planning for and integrating safety management into construction projects.
- Identify the responsibilities of key duty holders.
- Know how to prepare the pre-construction information, the construction phase plan and the health and safety file.
